PROFESSIONAL SUMMARY

Data Engineer with an active DoD TS/SCI CI Polygraph clearance and a track record of delivering in high-stakes classified environments. Built an engineering skill set through hands-on work - from Imagery Analyst to Data Operations Manager to hands-on engineer building ETL pipelines, S3 transfer infrastructure, and analytics products in AWS GovCloud and Databricks. Holds the Databricks Certified Data Engineer Associate certification with production experience in Unity Catalog, Delta Live Tables, PySpark, and Apache Spark. Equally comfortable driving technical engagement by leading a team, with years of supervisory experience managing 20-30 person teams and a background in client-facing service delivery.

TECHNICAL SKILLS

Languages & Tools: Python · PySpark · SQL · Spark (DLT / Structured Streaming) · Linux/RHEL · Git/GitHub · FastAPI · PostgreSQL · HTML/CSS

Platforms & Cloud: Databricks (Unity Catalog, Delta Live Tables, Workflows) · AWS GovCloud (S3, IAM) · Palantir Foundry · AWS CLI

Core Competencies: Data Pipeline Engineering · ETL/ELT Design · Distributed Computing · CDC Pipelines · Data Architecture · Technical Project Delivery · Team Leadership

EXPERIENCE

Data Engineer Feb 2025 – Present

ECS Federal · Fairfax County, VA · Hybrid

- Architect and build Delta Live Tables (DLT) pipelines in Databricks using the PySpark Pipelines API, including CDC workflows for incrementally exporting JSON records to Unity Catalog Volumes.
- Develop and manage large-scale S3-to-S3 file transfer pipelines in AWS GovCloud, orchestrating parallel chunked jobs to move hundreds of thousands of files across classified buckets.
- Designed and implemented an end-to-end ETL pipeline encompassing raw data ingestion, parsing, and transformation; dynamic API calls to partner systems to evaluate work status and conditionally trigger downstream ingestion; geohash-based tile split pipelines for satellite imagery processing; and ontology parsing pipelines capable of handling JSON files across multiple historical schema versions.
- Build ETL workflows and analytics data products supporting the Apollo program in a classified GovCloud environment, collaborating with cross-functional engineering and government stakeholders.

Data Operations Manager Jul 2024 – Feb 2025

ECS Federal · Fairfax County, VA · Hybrid

- Led data operations for a team supporting one of the largest AI defense programs in the DoD, managing priorities, deliverables, and day-to-day workflow across a team of data professionals.
- Served as the primary point of escalation for operational issues, coordinating between engineering teams, program management, and government clients to drive rapid resolution.
- Drove process improvements and enforced data quality standards across all program outputs, increasing team throughput and product reliability.

Technical Project Analyst Nov 2022 – Jul 2024

ECS Federal · Fairfax County, VA · Hybrid

- Supported a Technical Project Manager overseeing 10+ data scientists building automated data pipelines, analytics products, and ML-supporting datasets for the Apollo program.

- Conducted analyses on large classified datasets using SQL, PySpark, and Palantir Foundry; produced reports and dashboards in response to government requests.
- Created interactive dashboards enabling stakeholders to filter and explore large datasets; developed presentations and documentation for senior government leadership.
- Planned and led weekly team syncs to align objectives, track deliverables, and communicate status across engineering and government client stakeholders.

Classified Imagery Analyst Supervisor May 2019 – Nov 2022

ECS Federal · Springfield, VA · SCIF

- Managed and led 20–30 imagery analysts supporting the Apollo program - the largest AI military defense contract in the world - overseeing quality, quantity, and team performance.
- Developed onboarding and training materials for new analysts, designing structured workflows that enabled contributors to operate effectively in a classified environment.
- Produced labeled imagery outputs used to develop training, testing, and evaluation datasets for computer vision algorithms supporting full motion video and overhead aerial imagery.

EDUCATION

Bachelor of Business Administration - Project Management 2021 – 2023

Indiana University East

Associate's Degree - Business Administration & Management 2016 – 2018

Germanna Community College

CERTIFICATIONS

Databricks Certified Data Engineer Associate Databricks · 2026

CompTIA Security+ CompTIA · 2024

Databricks Certified Data Engineer Professional *In Progress*

CompTIA Linux+ *In Progress*

AWS Cloud Practitioner *In Progress*

NOTABLE PROJECTS

- **Hard Copy** (*FastAPI · PostgreSQL · Python*) - DVD & VHS collection tracker with a REST API backend and Bootstrap 5 frontend. Cloud hosting target on Railway.
- **Shelf Check Out** (*Python · Web Scraping*) - Grocery price comparison tool using web scraping and store APIs to surface the best deal across multiple retailers.
- **Magnolia Way Wedding Venue** (*HTML · CSS · JavaScript*) - Full website revamp with online payments, booking requests, and an admin dashboard with payment visualizations.
